With the increasing sophistication of modern cyber-attacks, it's more important than ever for schools to evaluate how they protect their endpoints, including desktops, laptops, and mobile devices. Every remote endpoint device is a possible point of entry into your network.

Preventing endpoint attacks is especially difficult because endpoints exist where technology and the human element intersect. It can be challenging to protect systems without interfering with the legitimate activities of your users.

Every school should implement an endpoint-security solution to provide real-time visibility and threat intelligence across endpoints, enabling them to detect and respond to threats quickly. The solution should include real-time malware and ransomware protection. It's also important to have an incident-response plan in place to mitigate any damage in the event of an attack.

We can answer your questions about endpoint security or any other IT-related matter. To schedule a free cybersecurity review, please contact Michael Randazza at mrandazza@promenet.com or 646-595-6645.
